

**MIXED MODE INTERACTION**

**ABSTRACT OF THE DISCLOSURE**

5           A user of a wireless device, such as a mobile phone, can make purchases or obtain information  
via a network, such as the Internet, using both voice and non-verbal methods. Users can submit voice  
queries and receive non-verbal replies, submit non-verbal queries and receive voice replies, or perform  
similar operations that marry the voice and data capabilities of modern mobile communication devices.  
The user may provide notification criteria indicating under what conditions a notification should be sent  
10 to the user's wireless device. When purchasing opportunities matching the selected notification criteria  
become available, the user is notified. The user can respond to the notification, and immediately take  
advantage of the purchasing opportunity if he so desires. Mixed-mode interactions can also be used by  
sellers to more advantageously control the marketing of distressed, time sensitive, or other  
merchandise/services.
